PROFILE

Frontend Developer with **~5 years of experience** architecting, scaling, and testing high-performance enterprise web applications using **React.js** and modern JavaScript (ES6+). Builds clean, reusable component systems, optimizes rendering performance, and ships **data-dense dashboards** and interactive **Google Maps** experiences used across large-scale business operations. Comfortable across the stack with working exposure to **Next.js API Routes** and **MongoDB**. An **AI-augmented developer** who uses modern AI tools daily to accelerate delivery and raise code quality, partnering with backend developers, UI/UX designers, QA, and stakeholders across the full product lifecycle.

TECHNICAL SKILLS

Tech Stack:	HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, i18n / Localization
State Management:	React Hooks, Redux, Redux Toolkit, Context API, TanStack React Query, Jotai, Zustand
UI & Styling:	Bootstrap, Tailwind CSS, Material UI, Sass (SCSS), LESS
Testing & TDD:	Jest, React Testing Library, React Hook Form, Zod, Storybook, Postman
Performance & A11y:	WCAG, Cross-Browser Compatibility, Lighthouse, Web Vitals, Accessibility Testing
Tools & Analytics:	Git & GitHub, NPM / Vite, Chrome DevTools, VS Code, Google Analytics (GA4)
AI Coding Tools:	Claude, Claude Code, GitHub Copilot, ChatGPT, Gemini
Tech Exposure:	Vue.js, Next.js API Routes, Node.js, Express.js, MongoDB, Mongoose

PROFESSIONAL EXPERIENCE

ANRX Solutions — Frontend Developer

Oct 2021 – Aug 2026

- Developed and tested **enterprise-grade React.js applications** and business-critical dashboards handling large-scale operational datasets, creating reusable components and building new features end-to-end from design through QA.
- Developed scalable application state using **Redux, Redux Toolkit, and the Context API**, and integrated **REST APIs** to support dynamic, data-driven UI functionality — identifying and fixing bugs through debugging and refactoring.
- Built **high-density, performance-optimized React data tables** with nested rows, server-driven search, advanced filtering, custom sorting, and pagination — leveraging memoization to keep large datasets fast and responsive.
- Implemented charts and **Google Analytics 4 (GA4)** tracking within React components for user interactions, custom events, downloads, and engagement metrics, enabling data-driven product decisions.
- Built interactive, high-performance geospatial interfaces with the **Google Maps JavaScript API** — integrating marker clustering, feature layers, and polygon & boundary rendering with geocoding to visualize thousands of location points.
- Engineered a **real-time notification component using WebSockets**, implementing resilient leader-election to auto-reassign the active connection on disconnect, ensuring duplicate-free live updates.
- Converted **Figma** designs into pixel-perfect, responsive components with clear technical documentation.
- Collaborated cross-functionally with backend developers, designers, and QA within an **Agile/Scrum workflow** — participating in sprint planning, and Git-based version control to uphold engineering development standards.
- Adopted **AI-augmented development approach**, using AI-assisted tools and agentic workflows to accelerate feature delivery.

Alec EV & Hybrid Battery Services (0→1 Build) — Independent Project May 2026 – Jun 2026

- Built and deployed a **production-ready business website** using **Next.js, TypeScript, and Tailwind CSS**, delivering a responsive, modern, and SEO-optimized experience: alecevhybrid.com.
- Owned the **end-to-end development lifecycle**, collaborating directly with the client to transform business requirements into production-ready features.
- Implemented **technical SEO** (schema, sitemap, robots.txt, canonical URLs, metadata, Core Web Vitals) and integrated **Google Search Console, GA4, Google Ads Conversion Tracking, and Google Maps**.
- Developed conversion-focused features including **WhatsApp lead generation**, optimized contact forms, interactive maps, and click-to-call actions.
- Managed deployment, domain configuration (Namecheap), and automated **Vercel CI/CD**, ensuring reliable production releases and ongoing maintenance.
- Used AI-assisted development workflows and agentic tools (Claude, ChatGPT, Gemini) to accelerate delivery and iteration speed without compromising code quality — the kind of leverage-driven, AI-augmented workflow product teams increasingly expect.

EDUCATION

B.Tech in Computer Science & Engineering Ongoing

PKG Group of Institutions, Panipat, Haryana

Diploma in Computer Science & Engineering 2019

Government Polytechnic, Sonepat, Haryana

Secondary School (10th), CBSE 2016

I.B.(L) Public School, Panipat, Haryana

CORE COMPETENCIES

Ownership & Accountability

Owns features from design through testing — going beyond the assigned ticket to catch bugs and edge cases early.

Cross-Functional Collaboration

Works directly with Product, Design, Backend and QA to turn ambiguous requirements into shipped, reliable features.

Self-Driven Execution

Delivered an independent project solo, end-to-end — direction, development, and deployment infrastructure.

Usability & Craft

Brings a strong sense for usability and visual aesthetics, paired with hands-on use of AI agents and agentic workflows to ship faster without cutting corners.

LANGUAGES & STRENGTHS

Hindi — Native / Full Professional

English — Professional Working

Ownership Mindset, Strong Work Ethic, Disciplined, Active Listener, Problem Solver, Fast Learner
